DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
2. Claims 18-22 and 34-36 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kondo et al. (of record) in view of applicant's admitted prior art figure 18 and description thereof ("AAPA Fig. 18") for reasons of record.
3. Claims 23-33 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kondo et al./AAPA Fig. 18 as applied above, and further in view of Kono (of record) for reasons of record.

Response to Arguments

4. Applicant's arguments filed 01/21/03 have been fully considered but they are not persuasive.

The applicant argues AAPA Fig. 18 does not disclose a magnetically coupled transmission line in directional coupler 2.

This argument is not convincing because its circuit representation is clearly shown as being nearly identical to the "magnetically coupled transmission lines" shown in the embodiments such as figure 1 with lines 200, 201, which is also described in the specification as a directional coupler (see page 14, lines 26-29).

The applicant argues that the rejection was based on "pick and choose from any one reference" and implies that impermissible hindsight was used.

5. The motivation for using a directional coupler was based on the fact that Kondo et al reference is silent on the exact details of the APC circuit 25 (automatic transmission power control circuit); therefore, one of ordinary skill in the art would have been motivated to use any art-recognized equivalent conventional APC means such as the one shown by the AAPA figure 18. In response to applicant's argument that the examiner's conclusion of obviousness is based upon improper hindsight reasoning, it must be recognized that any judgment on obviousness is in a sense necessarily a reconstruction based upon hindsight reasoning. But so long as it takes into account only knowledge which was within the level of ordinary skill at the time the claimed invention was made, and does not include knowledge gleaned only from the applicant's disclosure, such a reconstruction is proper. See *In re McLaughlin*, 443 F.2d 1392, 170 USPQ 209 (CCPA 1971).

The applicant further argues that there is no reasonable expectation of success because Kondo et al. wants to reduce the number of components.

This argument is not persuasive because circuit element 25 is part of the device of Kondo et al. as shown in figure 2 but is not described in detail.

The applicant further argues that it is improper to base an obviousness rejection based on "well within the ordinary skill of the art".

This argument is not persuasive because the rejection was not based on "well within the ordinary skill of the art".

Accordingly, the rejections are sustained.

Conclusion

6 **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
